PROJECTS

STUDENT PORTFOLIO

The student portfolio application developed with Python and tkinter offers a convenient solution for organizing and accessing comprehensive student information in universities or colleges. It provides a centralized platform to view and manage all student records efficiently.

MEDI-BLOCK

MediBlock is a decentralized blockchain system that securely stores and presents patients' data. Developed using React.js, JavaScript, and Solidity, it ensures the privacy and integrity of medical records while enabling seamless access and sharing among healthcare providers.

PORTFOLIO WEBSITE

My website showcases my achievements and progress, reflecting my dedication and proficiency in creating dynamic web applications. and programming

EXPERIENCE

AWS CLOUD

01/06/2022 - 30/06/2022

Implemented a project of Reverse Proxy : Reverse proxy as the name suggests does the opposite of what a forward proxy can do. It takes requests from the user and forwards them to the host web servers acting as a load balancer. We can leverage this behaviour to serve different apps under the same hood.
